

Strategies for supporting pupils with Special Educational Needs and Disabilities in Maths lessons

Area of Need	How we support our pupils to succeed
Communication and	Daily timetable visible in every classroom identifying morning
Interaction	 Dury Inherable visible in every classioon indefinitying motining maths session Visual cues (task management board) Individual work stations where required. Consistent approach and structure to the maths lesson. Children are prepared for any change to the structure or routine. Sensory breaks given where required. Mathematical vocabulary is integrated throughout the lesson with visuals to support new language. Questioning techniques used invite discussion rather than direct right/wrong answers that may make a pupil feel uncomfortable. The children are aware of a clear goal for what they are expected to achieve during the maths lesson. Visual displays (Maths working walls) referred to, to illustrate new strategies. Verbal instructions are given clearly and consider how many instructions are appropriate to give at any one time. Regular check ins from adults to assess understanding and enable early intervention where misconceptions arise.
Cognition and Learning	Concrete resources and manipulatives are available for children to access independently. Adults understand how to use manipulatives to support children. There is a daily opportunity to recall and repeat areas of mathematics explored in previous lessons. The opportunity for peer and adult support is built into every lesson. Questions include visual representations to illustrate concepts. Large spaces for working out are provided next to each question. Gaps in learning are identified and addressed promptly. Questions and activities match children's academic needs. Concrete resources and visual representations are given when new concepts are introduced and wherever appropriate. Self assessment opportunities are included in each lesson. Key vocabulary introduced and explained at the start of each lesson and regularly referred to throughout the lesson. Information is repeated and reviewed, varying vocabulary where possible to deepen understanding. PowerPoint slides are not overcrowded with information.

	Incorrect number formation is addressed promptly whenever it
	arises.
	Where appropriate, questions provided are on coloured paper.
	Dyslexia friendly font is used on all question strips, PowerPoint
	slides, etc (eg Century Gothic) and is of an appropriate size to
	be read clearly.
Social Emotional and	Verbal praise to boost confidence and self esteem.
Mental Health	Use of pictorial representations and concrete resources to
	support new mathematical concepts.
	Trusting relationships are nurtured between all adults in the
	classroom and the children.
	Adults are familiar with possible triggers and anxiety inducing
	scenarios.
	Individual work stations used where appropriate.
	Adults are trained in PACE and WINE techniques and approach
	all children from a place of curiosity.
	Task management boards are used to break down systems and
	concepts.
	There is a consistent approach to expectations and behaviour
	which is based on positive praise.
	The children are aware of a clear goal for what they are
	expected to achieve during the maths lesson.
	Learning is broken down into manageable chunks
